Medline Makes Mobility More Mobile

The Weil Knee Walker by Medline

New!

Common Uses:

- Device used with any injury or problem to the lower extremity that would require person to be off the foot or leg to replace crutches or walker
- Fracture of foot, ankle or lower leg
- Post operative immobilization and non-weight bearing of foot, ankle or lower leg
- Injury to foot, ankle or lower leg requiring non-weight bearing
- Diabetic foot wounds that require "off loading" to heal

Model No. MDS86000

Q and A with Dr. Weil

"Why would a person use a knee walker vs. crutches or a wheelchair?"

Dr. Weil: "While crutches and wheelchairs have benefited my patients, they do have shortcomings. Crutches can be awkward and unsteady and wheelchairs are not only heavy but bulky. This causes frustration and prevents optimal outcomes."

"What other benefits does this product offer?"

Dr. Weil: "The advanced design allows for comfort and turning control, not previously available. The three-wheel design makes use for all shapes and sizes of people much easier. There is no doubt that this device will change the way non-weight bearing options are considered."
